

## The Saut du Gier waterfall

**Departure from La Valla du Gier – La Scie du Bost**  
**Length: 2.5 km – Average time: 2 hours**

This is a short hike but with a bit of elevation gain (elevation gain: 186 m).

The outward journey represents the climb to the waterfall and the return the descent to the hamlet of Scie du Bost.

In winter and during rainy periods it is a real waterfall which transforms into a thin trickle of water during drier periods.

This trail does not present any difficulty. In the hamlet of La Scie du Bost, do not follow the Grand Creux stream, but take the Park path no. 4 between two houses, marked in white and brown, follow it for 300m until the first crossroads towards a magnificent beech tree, then take the path to the right up to the signposted Saut du Gier waterfall.

The return is via the same route.
